Sniper Ashfield Pro Review 2026: EMA Crosses Scored by Six Checks

A 9/21 EMA crossover indicator for NinjaTrader 8, MetaTrader 4/5, TradingView and cTrader that scores every cross against trend, VWAP, RSI, MACD, ADX and volume, and draws the entry, an ATR stop and three targets — from €47 one-time with a 60-day money-back guarantee.

PRICE
€77 for NinjaTrader 8
€47 for MT4/MT5, TradingView, cTrader

GUARANTEE
60-day money-back
refund via Digistore24

RUNS ON
NinjaTrader 8 Desktop
plus MT4/MT5, TradingView, cTrader

BEST FOR
Futures & intraday traders
MNQ, MES, ES, GC, CL and more

By Serkan Fatih Gökdemir · SoftwareSelects

OUR VERDICT

A disciplined way to trade the 9/21 EMA cross

Top pick NinjaTrader 8

Sniper Ashfield Pro takes the simplest signal in trading — the 9/21 EMA cross — and adds the checking most traders do by eye across four extra panels. On the bar of each cross it scores six checks (EMA trend, session VWAP, RSI, MACD, ADX and a volume burst), prints a plate only when at least three agree, and draws the plan: entry at the close, a stop 1.5 ATRs away and targets at 1R, 2R and 3R. Like every AlgoFXStore product it is unusually honest: real unedited charts on 12 futures markets, every setting explained, no win-rate or income claims, and a 60-day money-back guarantee.

What we like

- **Fewer, better-checked crosses.** A plate prints only when at least 3 of 6 checks agree; stars show how many did.
- **A plan with every plate.** Entry at the close, an ATR stop that never moves and targets at 1R, 2R and 3R with price tags.
- **No repainting by default.** With Non-Repaint Mode on, a plate is decided when its bar closes and stays fixed.
- **One dashboard instead of four panels.** 19 rows read market bias, VWAP, RSI, MACD, ADX, volume and the active signal.
- **Built for futures.** Stops in ticks, session VWAP and alerts for every level hit on NinjaTrader 8.
- **Honest and protected.** Real charts, a 16-page manual, no profit claims and a 60-day money-back guarantee.

Good to know

- **An indicator, not a robot.** It signals, draws and alerts; you place and manage every order.
- **A cross confirms, not predicts.** EMA crosses come after a move has started — the score makes plates fewer, not earlier.
- **Stars are not odds.** Five stars means 5 or 6 checks agreed, not a higher chance of winning.
- **NinjaTrader 8 Desktop only.** The NT8 version needs NinjaTrader 8.1.x on Windows — not NinjaTrader Web or mobile.

WHAT'S INSIDE

A trigger, a score and a plan

Every part of Sniper Ashfield Pro is visible on the chart or the dashboard, so each signal is easy to check. The NinjaTrader 8 version has 21 setting groups and 13 alert events.

The trigger

9/21 EMA cross
BUY only where the 9 crosses above the 21, SELL below

EMA ribbon & candle tint
Trend colour at a glance

Session VWAP line
Green above, red below

Signal cooldown
No repeat signal on the same side within 5 bars

The score

Six checks
EMA trend, VWAP, RSI(14), MACD 12/26/9, ADX(14), volume

Minimum score
Default 3 of 6; raise it for fewer plates

Stars on every plate
Five stars = 5 or 6 checks agreed

Standing scores
Watch the BUY and SELL scores build before the cross

The plan & alerts

Entry, ATR stop, 3 targets
Stop 1.5 × ATR(14), targets 1R, 2R, 3R

19-row dashboard
Market bias, momentum, active signal, tally

13 alert events
Signals and TP1–TP3 / SL hits, by sound or e-mail

Plate styles
Plate, disc, plain text or LONG/SHORT arrows

Trading risk: futures and leveraged products carry a high risk of loss. No indicator can predict the market — Sniper Ashfield Pro helps you filter and plan EMA crosses, it does not guarantee results. Read our earnings disclaimer.

HOW IT WORKS

From an EMA cross to a scored, planned trade

1

The cross is the trigger

A BUY can only happen on the bar where the 9 EMA crosses above the 21 EMA; a SELL only where it crosses below. With Non-Repaint Mode on, the cross is judged when its bar closes.

2

Six checks score the bar

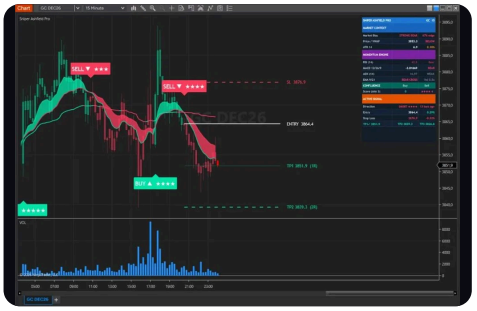

Each agreeing check adds a point: EMA trend, close vs session VWAP, RSI above/below 50, MACD vs its signal, ADX above 20 and a volume burst. A plate prints at the minimum score (3 by default) and shows the score as stars.

3

The plan is drawn for you

The close is the entry. The stop sits 1.5 × ATR(14) away and never moves; targets are at 1R, 2R and 3R. Reached targets turn solid and faded; TP3 or the stop ends the plan.

4

You size and place the order

Turn the stop into ticks and dollars, size your contracts from your own budget and place a bracket order — the calculator below does the maths.

Signal	SELL ★★★★
Entry	3864.4
Stop (1.5 ATR)	3876.9
TP1 / TP2 / TP3	1R · 2R · 3R
Your decision	Size & bracket it

PRICING

One payment per platform

Each platform version is a separate one-time purchase through Digistore24, with a PDF manual and a 60-day money-back guarantee. Prices in euros, from the seller's pages.

Futures

NinjaTrader 8

€77 one-time

NinjaScript Add-On for NinjaTrader 8 Desktop.

- Shown on 12 futures markets (MNQ, ES, GC, CL...)
- 16-page PDF manual, 21 setting groups
- 13 alert events incl. TP and SL hits
- 60-day money-back guarantee

MetaTrader 4 + 5

€47 one-time

Both builds for forex, gold, indices, oil and crypto.

- Daily VWAP and tick-volume burst
- M15 to H4 charts
- Manual for each platform
- 60-day money-back guarantee

TradingView

€47 one-time

Full Pine Script source code.

- 13 alert conditions with entry, stop and targets
- TP1/TP2 lines turn solid when reached
- PDF guide
- 60-day money-back guarantee

cTrader

€47 one-time

One .algo indicator file.

- 19-row information panel
- Bar-close confirmation by default
- PDF manual
- 60-day money-back guarantee

VAT is added at checkout where it applies. Sniper Ashfield Pro is an indicator, not an automated trading system or financial advice.

HOW TO TRY IT

Try Sniper Ashfield Pro risk-free in 4 steps

1

Choose your platform

NinjaTrader 8 for €77, or MT4/MT5, TradingView or cTrader for €47.

2

Install in simulation

A few minutes with the steps below — no real money at risk.

3

Watch the stars

See which scores and markets suit your trading.

4

Decide within 60 days

Keep it, or request a full refund through Digistore24.

Your safety net: Sniper Ashfield Pro comes with a 60-day money-back guarantee handled by Digistore24. If it is not for you, request a full refund within 60 days through the link in your Digistore24 order e-mail. Trading carries a high risk of loss; this is a software tool, not financial advice.

SETUP GUIDE

Installing Sniper Ashfield Pro on NinjaTrader 8

These steps are for NinjaTrader 8 Desktop; MetaTrader, TradingView and cTrader are below. Installation takes a few minutes — then practise in simulation before trading live.

1 Pick your platform and check out

Each platform is a separate product: **NinjaTrader 8** (€77), **MetaTrader 4 + 5**, **TradingView** or **cTrader** (€47 each). Checkout and delivery are handled by Digistore24.

- After paying you land on your download page; the link is also in your Digistore24 order e-mail — keep it for the 60-day refund window.
- Check you run **NinjaTrader 8 Desktop 8.1.x** on Windows — NinjaTrader Web and mobile are not supported.

💡 Not sure? Choose the platform where your charts and broker account already are.

2 Download the zip — keep it zipped

Download `SniperAshfieldProAlgoFX.zip` (0.2 MB). Do **not** unzip it: NinjaTrader imports the zip file itself.

3 Import it into NinjaTrader 8

In the NinjaTrader **Control Center** open **Tools → Import → NinjaScript Add-On**, select the zip and confirm.

- NinjaTrader compiles it and confirms the import.
- It then appears as “Sniper Ashfield Pro AlgoFX” in your Indicators list.

4 Set up the chart

Open a chart of your contract and load at least 500 bars so the averages settle: about 3 days on 1 minute, 5 days on 5 minute, 15 days on 15 minute.

- Choose the **Trading Hours** template on purpose — RTH if you trade only the regular session, because it decides where the VWAP starts.
- After a contract roll, trade the front month and check the chart: one oversized bar can widen the ATR for a while.

5

Add the indicator

Right-click the chart → **Indicators**, add **Sniper Ashfield Pro AlgoFX** and click OK. Keep **Calculate** on **On bar close** and **Non-Repaint Mode** on.

- Start with the defaults — they are the settings on all the seller's charts.
- Raise **Minimum Confluence Score** (1–6) or **Signal Cooldown** for fewer plates.
- Switching a Require check off gives its point for free — more plates, not fewer.

6

Read the plate and the dashboard

When a plate prints, read its stars and the dashboard: Price/VWAP on the signal's side and ADX STRONG mean more of the market agrees. Hover a plate to see the exact score out of 6 and all five levels.

- Skip a signal after one big bar has already covered most of the way to TP1, and signals inside scheduled news.

7

Size the trade in ticks

Divide the distance from ENTRY to SL by the tick size, multiply by the tick value for the risk per contract, and size from your own budget — or use the calculator above.

- Round the stop to the next valid tick away from the entry and the targets to the nearest tick.
- Place a bracket order so the levels are handled when touched — alerts arrive only at bar close.

8

Set alerts and practise in simulation

Choose which of the 13 alert events you want (signals, TP1–TP3 and SL hits) — in the Alerts Log, by sound or by e-mail. Then trade it in NinjaTrader's simulation account for a few weeks.

- Decide in advance what you do at TP1 and TP2: take part off and move the stop, or hold for TP3.
- If it is not for you, request your refund within 60 days.

OPTIONAL

Other platforms: MetaTrader 4/5, TradingView and cTrader

The same six-check logic on every platform — only the installation differs. Each version comes with its own PDF guide.

MetaTrader 4 + 5

1. In MetaTrader open **File → Open Data Folder**.
2. Copy the `.ex4` into `MQL4/Indicators` or the `.ex5` into `MQL5/Indicators`.
3. Refresh the Navigator and drag Sniper Ashfield Pro onto a chart.

Both builds come in one €47 download. Uses the day's VWAP and tick volume.

TradingView

1. Open the downloaded Pine Script code file and copy all of it.
2. In TradingView open the **Pine Editor**, paste and click **Save**.
3. Click **Add to chart**, then set up alerts from its 13 alert conditions.

Full Pine Script source code and a PDF guide.

cTrader

1. Unzip the download and double-click the `.algo` file — cTrader Desktop installs it.
2. Or import the file in **cTrader Automate**.
3. Open **Indicators → Custom** on a chart and add Sniper Ashfield Pro.

One .algo file and a PDF manual.

Six settings worth knowing

Minimum Confluence Score
Default 3 of 6; raise it to 4 or 5 for fewer, better-checked plates.

Signal Cooldown
Default 5 bars; a longer cooldown avoids repeat signals in chop.

Non-Repaint Mode
Keep it on so plates are decided on the closed bar.

ATR stop multiplier
1.5 × ATR(14) by default; the risk unit is never under ten ticks.

Require switches
Turning a check off gives its point free — more plates, not fewer.

Plate style
Plate, disc, plain text or LONG/SHORT arrows.

PRINT & TICK

Your Sniper Ashfield Pro setup checklist

Tick each step as you go. Installation takes a few minutes.

- [ ] Pick your platform and check out
- [ ] Download the zip — keep it zipped
- [ ] Import it into NinjaTrader 8
- [ ] Set up the chart
- [ ] Add the indicator
- [ ] Read the plate and the dashboard
- [ ] Size the trade in ticks
- [ ] Set alerts and practise in simulation

Good to know: menu and setting names above come from the seller's product pages (November 2026). The seller answers questions before you buy at the support address on the product page — and our assistant can walk you through the setup.

YOUR 60-DAY TEST PLAN

Make the most of the money-back window

Days 1–3	Import it, read the manual and set up your charts and trading hours in simulation.
Days 4–30	Watch every plate: its stars, the dashboard and where the stop and targets sit.
Days 31–50	Try a higher minimum score or longer cooldown. Size every simulated trade in ticks.
Before day 60	Decide: keep it, or request your refund through the Digistore24 order e-mail.

FAQ

Quick answers

What is Sniper Ashfield Pro?

Sniper Ashfield Pro is an EMA crossover indicator by Kestutis Balciunas (AlgoFXStore). It scores every 9/21 EMA cross against six checks and draws an entry, an ATR stop and three targets when enough of them agree.

Does Sniper Ashfield Pro repaint?

With Non-Repaint Mode on (the default), a plate is decided when its bar closes and stays fixed, according to the seller.

How much does it cost?

The NinjaTrader 8 version costs €77; the MetaTrader 4 + 5, TradingView and cTrader versions cost €47 each — all one-time payments with a 60-day money-back guarantee.

What do the stars mean?

They show how many of the six checks agreed on the cross bar; five stars means 5 or 6. They are not a probability of winning.

Which markets does it suit?

On NinjaTrader 8 the seller shows it on index, metal, energy, currency and bond futures such as MNQ, ES, GC, CL, 6E and ZB on minute charts. The MetaTrader version is for forex, gold, indices, oil and crypto from M15 to H4.

Will it trade for me?

No. It signals, draws and alerts; you place and manage every order.
