OUR VERDICT

Affordable, practical training for the job behind every good product

Best value BA course

Most failed projects do not fail on code — they fail on unclear requirements. User Requirements Mastery teaches the full requirements lifecycle in plain language: the communication skills you need with stakeholders, the types of requirements, elicitation techniques (interviews, workshops, brainstorming, document and interface analysis, observation, surveys, prototyping), prioritisation with MoSCoW, Kano and the impact–effort matrix, writing user stories, acceptance criteria, use cases, wireframes and storyboards, and managing change, scope creep and traceability in Agile teams. Instructor Dejan Majkić (MSc, 20+ years in IT, Product Owner and Scrum Master certifications) has taught 140,000+ students. At $27 it is one of the most affordable structured requirements courses we have seen; if you also want Scrum, testing or PSM I prep, his $47 Scrum Career Accelerator bundle includes a requirements course too.

What we like

- **Covers the whole lifecycle.** Elicit, analyse, prioritise, document, validate and manage change.
- **Communication first.** Starts with asking questions and running customer meetings — the real skill behind requirements.
- **Agile-ready.** User stories, acceptance criteria, epics, backlog refinement and Sprint 0.
- **Hands-on practice.** Exercises, case studies and quizzes after each module.
- **Experienced instructor.** 20+ years in IT, PO and Scrum Master certified, 140,000+ students.
- **Low price, safe to try.** $27 once, with a 60-day refund period through Digistore24.

Good to know

- **Not an official certification.** You get a certificate of completion, not IIBA or PMI-PBA credentials.
- **Edition details may differ.** The instructor also sells a $97 edition on his own school; we could not confirm every bonus is in the $27 listing.
- **Self-paced video.** No live coaching; questions go by e-mail.
- **Bundle may be better value.** The $47 Scrum Career Accelerator includes a requirements course plus 26 others.

WHAT'S INSIDE

9 modules: from the first meeting to Sprint 0

The outline the instructor publishes for his Mastering User Requirements course (his school page). The Digistore24 listing describes the same topics.

Understand (modules 1–2)

Communication skills
Asking questions, boundaries, customer meetings

Types of requirements
Business, user, functional, non-functional

Business rules
Plus external interfaces and constraints

Documentation
Clear, concise, information-flow diagrams

Gather & prioritise (modules 3–4)

Elicitation
Stakeholder analysis, interviews, focus groups

More techniques
Observation, surveys, interface and document analysis, prototyping

Prioritisation
MoSCoW, Kano, impact–effort matrix

Validation
Involving stakeholders, validating requirements

Communicate & manage (modules 5–9)

Express requirements
User stories, acceptance criteria, epics, use cases

Visualise
Wireframes and storyboards

Manage change
Scope control, risks, scope creep

Agile delivery
Backlog refinement, tasks, Sprint 0, sprint execution

Good to know: the module outline above is taken from the instructor's own course page, where the course lists 75+ lessons, about 10.5 hours of video, templates, homework and quizzes for $97. The $27 Digistore24 listing promises the same topics plus exercises, case studies and a certificate of completion; check your members area for the exact lesson list.

HOW IT WORKS

From vague request to ready story

1

Learn to ask the right questions

Module 1 is about communication: asking questions, setting boundaries, bridging gaps in the team and preparing for a customer meeting.

Module 1	Communication
Asking	questions
Meetings	prepared
Quiz	✔

2

Know what kind of requirement you have

Module 2 separates business requirements, business rules, user, functional and non-functional requirements, interfaces and constraints.

3

Gather and prioritise

Modules 3–4 teach a dozen elicitation techniques and three prioritisation methods so the team builds the most valuable things first.

Elicit	12 techniques
Prioritise	MoSCoW · Kano
Validate	stakeholders

4

Write it down and keep it under control

Modules 5–8 cover user stories, acceptance criteria, epics, use cases, wireframes and storyboards, then change control, scope creep, backlog refinement and Sprint 0.

Story	so that …
Criteria	Given/When/Then
Sprint 0	ready

PRICING

One small payment

User Requirements Mastery is a one-time purchase through Digistore24. Price from the Digistore24 order page.

Focused choice

User Requirements Mastery

$27 one-time

Online course, self-paced.

- Full requirements lifecycle
- Exercises and case studies
- Certificate of completion
- 60-day refund period through Digistore24

Alternative: Scrum Career Accelerator

$47 one-time

The instructor's 27-course bundle, including his requirements course.

- Requirements, user stories, testing, risk
- Scrum Masterclass and PSM I prep
- 60-day refund for any reason
- See our full review

Taxes may be added at checkout where they apply. Read our Scrum Career Accelerator review and our Software Testing Mastery review to compare.

HOW TO TRY IT

Try the course risk-free in 4 steps

1
Choose course or bundle
$27 course, or $47 bundle.

2
Pick a real project
Use it as your case study.

3
Finish modules 1–3
Ask better questions this week.

4
Decide in the refund period
Keep it, or request a refund.

Your safety net: the order is handled by Digistore24 Inc., whose orders come with a refund period of at least 60 days — if the course does not help, use the refund link in your Digistore24 order e-mail.

SETUP GUIDE

Getting started with the course

Access arrives right after payment. A few hours a week is enough to finish in about a month.

1

Decide: single course or bundle

If requirements are your only goal, buy this course ($27). If you also want Scrum, testing or PSM I prep, the $47 Scrum Career Accelerator includes the instructor's requirements course.

2

Buy and get access

Check out through Digistore24. You are taken to the access page right away and get the details by e-mail — keep the order e-mail, it holds your refund link.

3

Pick a real project

Choose a feature you are working on now. Use it as your case study through every module — that is how the lessons stick.

4

Start with communication

Do module 1 first, even if you are experienced: preparing a customer meeting and asking better questions changes everything after it.

💡 Write down 10 questions for your next stakeholder meeting while you watch.

5

Map your requirement types

After module 2, sort your project's needs into business, user, functional and non-functional requirements and constraints.

6

Elicit and prioritise

Try two new techniques from module 3 (e.g. observation and a short survey), then prioritise with MoSCoW — use our prioritiser above.

7

Rewrite your backlog

Use module 5 to rewrite 5 stories with "so that" and Given/When/Then criteria; run them through our quality checker.

8

Finish and get your certificate

Complete the quizzes and exercises to get your certificate of completion; add it to LinkedIn. If the course is not for you, request a refund in time.

OPTIONAL

Where to focus for your role

Everyone gets the full course; these are the parts to focus on first.

Product Owner

1. Module **4**: MoSCoW, Kano, impact–effort.
2. Module 5 user stories and acceptance criteria.
3. Module 8 backlog refinement and Sprint 0.

Goal: a backlog the team trusts.

Business Analyst

1. Modules **2–3**: types and elicitation techniques.
2. Module 5 use cases, wireframes, storyboards.
3. Module 6 traceability and change control.

Goal: complete, testable specs.

Project manager / Scrum Master

1. Module 1 communication and customer meetings.
2. Module 6 scope creep and risks.
3. Module 7 vague client requests.

Goal: less rework, fewer surprises.

Six things worth knowing

$27 once
Via Digistore24.

60-day refund
Digistore24 Inc. order.

Agile + classic
Stories and use cases.

Certificate
Of completion, not IIBA/PMI.

Bundle option
In the $47 Scrum Career Accelerator.

Beginner-friendly
No experience needed.

PRINT & TICK

Your User Requirements Mastery setup checklist

Tick each step as you go — from your first lesson to your certificate.

- [ ] Decide: single course or bundle
- [ ] Buy and get access
- [ ] Pick a real project
- [ ] Start with communication
- [ ] Map your requirement types
- [ ] Elicit and prioritise
- [ ] Rewrite your backlog
- [ ] Finish and get your certificate

Good to know: module names follow the instructor's course page (November 2026). Our assistant can help you plan your weeks.

YOUR 4-WEEK PLAN

Learn it on a real project

Week 1	Modules 1–2: communication and requirement types.
Week 2	Modules 3–4: elicitation and prioritisation.
Week 3	Module 5: rewrite 5 stories with acceptance criteria.
Week 4	Modules 6–9: change, scope creep, Sprint 0 — then your certificate.

FAQ

Quick answers

What is User Requirements Mastery?

An online course by Dejan Majkić on eliciting, analysing, prioritising, documenting and managing user requirements for software projects.

Who is it for?

Product Owners, Business Analysts, software product and project managers, Scrum Masters and anyone who turns customer needs into work for developers.

How much does it cost?

$27 one-time through Digistore24.

Is there a certificate?

Yes, a certificate of completion. It is not an official IIBA or PMI credential.

Which techniques are covered?

Interviews, workshops, brainstorming, focus groups, document and interface analysis, observation, surveys and prototyping; MoSCoW, Kano and impact–effort prioritisation; user stories, acceptance criteria, use cases, wireframes and storyboards.

Is it Agile or traditional?

Both. It covers classic requirements work and how it fits into Agile: backlog refinement, user stories, Sprint 0 and sprint execution.
