OUR VERDICT

The most transparent Ichimoku tool we have seen

Top pick MetaTrader

Kumo Forge Pro keeps the classic Ichimoku and adds three things traders usually work out by eye: periods that adapt to volatility, a 0–100 confluence score for every setup and a complete trade plan — entry, stop and three targets — drawn the moment a signal prints on a closed bar. What sets it apart is honesty: the seller shows 26 unedited MetaTrader charts at default settings, publishes how often it signals, explains all 72 inputs, makes no profit or win-rate claims and backs it with a 60-day money-back guarantee. Both MT4 and MT5 builds come in one €47 download.

What we like

- **No repainting.** Signals are decided on closed bars — once a plate prints, it stays where it is.
- **Every setup scored.** Eight factors (RSI optional as a ninth) give a score out of 100, so strong and weak crosses no longer look alike.
- **A plan with every signal.** Entry, stop at the cloud edge, Kijun or 2 ATR, and targets at 1.5R, 2.5R and 4R.
- **Five signal types.** TK cross, Kijun bounce, cloud-edge bounce, Kumo breakout and retest from one rule set.
- **Honest documentation.** 26 real charts, signal-frequency tables, 27-page manuals and no income claims.
- **Low one-time price.** €47 for MT4 and MT5 together, free updates to the current version, 60-day refund window.

Good to know

- **An indicator, not a robot.** It scores, draws and alerts; you decide and place every trade yourself.
- **The % is not a probability.** “Long 74%” means 74 points of agreement out of 100, not a 74% chance of winning.
- **Stops follow the cloud.** Stops sit at the cloud edge, the Kijun or two ATRs — not at swing highs and lows.
- **One platform per purchase.** MT4/MT5, TradingView, cTrader and NinjaTrader 8 are separate products.

WHAT'S INSIDE

An adaptive cloud, a score and a plan

Kumo Forge Pro is built in three layers you can see on the chart. The MetaTrader version has 72 inputs and 22 alert events, all explained in the manual.

Adaptive Ichimoku

Adaptive periods
Tenkan 5–13, Kijun 16–36, Span B 31–73 with volatility

Classic mode
Fixed 9, 26 and 52 if you prefer

Support & resistance boxes
Drawn where a flat Kijun ends

Multi-timeframe panel
Trend on M15, H1 and H4 from closed bars

Scored signals

Confluence score 0–100
Cloud, TK lines, Chikou, cloud direction and thickness, volume, momentum

Five signal types
TK cross, Kijun bounce, cloud-edge bounce, breakout, retest

Min Confluence Score
Default 40; raise towards 80 for fewer, stronger setups

Filters
Kumo thickness, volume and Chikou confirmation

Plan & alerts

Entry, stop, 3 targets
1.5R, 2.5R and 4R by default, all adjustable

28-row dashboard
Market data, Ichimoku state, score, open trade

22 alert events
Popup, sound, push to the MT app or e-mail

Webhook JSON
Alerts as JSON for tools that read it

Trading risk: trading forex, futures, indices and crypto carries a high risk of loss. No indicator can predict the market — Kumo Forge Pro helps you judge and plan setups, it does not guarantee results. Read our earnings disclaimer.

HOW IT WORKS

From a cloud to a scored, planned setup

1

The cloud adapts

The indicator places the current ATR(14) within its range over the last 50 bars. In fast markets the periods shorten, in quiet markets they lengthen — so the cloud reacts to the market you are actually trading.

2

Every setup gets a score

Eight factors add up to a score out of 100: price against the cloud, Tenkan against Kijun, the Chikou, cloud direction and thickness, volume, momentum and its acceleration. 80+ is Strong, 50+ Standard.

3

The plan is drawn for you

The signal bar's close is the entry. The stop goes beyond the cloud edge plus 0.5 ATR (or the Kijun, or two ATRs) and three targets sit at 1.5, 2.5 and 4 times that risk, with price tags on the chart.

4

You decide

The dashboard tracks the plan and alerts you when targets or the stop are reached. You choose the position size and place the order — the calculators below help with that.

Signal	Sell · score 78
Entry	1.34507
Stop	1.34974
TP1 / TP2 / TP3	1.5R · 2.5R · 4R
Your decision	Size & place it

PRICING

One payment per platform

Each platform version is a separate one-time purchase through Digistore24, with free updates to the current version. Prices in euros, from the seller's pages.

Both builds

MetaTrader 4 + 5

€47 one-time

The .ex4 and .ex5 in one download.

- Two 27-page PDF manuals
- 72 inputs, 22 alert events
- Dashboard with 28 rows
- 60-day money-back guarantee

TradingView

€47 one-time

Full Pine Script source code.

- Paste into the Pine Editor and add to chart
- 5-page PDF guide
- Up to nine scoring factors, six signal marks
- 60-day money-back guarantee

cTrader

€47 one-time

One .algo indicator file.

- Double-click to install in cTrader Desktop
- 11-page PDF manual, 75 settings
- Optional Chikou breakout signal
- 60-day money-back guarantee

NinjaTrader 8

€77 one-time

NinjaScript Add-On for futures traders.

- Stops counted in ticks for MNQ, MES, MGC, MCL
- 15-page PDF manual
- Dashboard reads 15, 60 and 240 minutes
- 60-day money-back guarantee

VAT is added at checkout where it applies. Kumo Forge Pro is an indicator, not an automated trading system or financial advice.

HOW TO TRY IT

Try Kumo Forge Pro risk-free in 4 steps

1

Choose your platform

MT4/MT5, TradingView or cTrader for €47, NinjaTrader 8 for €77.

2

Install on a demo account

Five minutes with the steps below — no real money at risk.

3

Watch the scores

See which signal types and scores suit your markets.

4

Decide within 60 days

Keep it, or request a full refund through Digistore24.

Your safety net: Kumo Forge Pro comes with a 60-day money-back guarantee handled by Digistore24. If it is not for you, request a full refund within 60 days through the link in your Digistore24 order e-mail. Trading carries a high risk of loss; this is a software tool, not financial advice.

SETUP GUIDE

Installing Kumo Forge Pro and setting it up

These steps are for MetaTrader 4 and 5; TradingView, NinjaTrader 8 and cTrader are below. Installation takes about five minutes — then practise on a demo account before you trade real money.

1 Pick your platform and check out

Each platform is a separate product: **MetaTrader 4 + 5** (€47), **TradingView** (€47), **cTrader** (€47) or **NinjaTrader 8** (€77). Checkout and delivery are handled by Digistore24.

- Right after paying you land on your download page; the link is also in your Digistore24 order e-mail — keep it for the 60-day refund window.

💡 Not sure? Choose the platform where you already have your charts and broker account.

2 Download and unzip

Download the zip and unzip it. The MetaTrader version contains `Kumo_Forge_Pro.ex4`, `Kumo_Forge_Pro.ex5` and a 27-page PDF manual for each platform.

3 Copy the file into MetaTrader

In MetaTrader open **File → Open Data Folder**. Copy the `.ex4` into `MQL4/Indicators` (MetaTrader 4) or the `.ex5` into `MQL5/Indicators` (MetaTrader 5).

- Back in MetaTrader, right-click **Indicators** in the Navigator and choose **Refresh** (or restart the terminal).

4 Attach it to a chart

Drag **Kumo Forge Pro** from the Navigator onto a chart and click **OK**. Start with the default inputs — they are the settings used on all the seller's charts.

- Make sure the chart has enough history loaded; it calculates the last 20,000 bars by default.
- The dashboard appears in the corner of your choice (top right by default).

5

Choose how selective it is

Open the inputs and look at **Min Confluence Score** (default 40). Raise it towards 80 if you only want the setups with most factors behind them.

- Turn signal types on or off under **Signal Types**.
- Switch **Calculation Mode** between Adaptive and Classic (fixed 9, 26, 52).
- Choose where the stop goes under **SL Mode**: Kumo Edge, Kijun or ATR.

6

Read the dashboard and the plan

Each signal shows its score and draws the entry, stop and three targets with price tags. The dashboard tracks the trade and shows the trend on M15, H1 and H4.

- Remember: “Long 74%” is a score, not a probability.
- Use the position-size calculator above to size each trade before you place it.

7

Set up alerts

Pop-up alerts are on by default. For alerts on your phone, enable **Push notification** in the inputs and enter your MetaQuotes ID under **Tools → Options → Notifications**.

- For e-mail alerts, set up **Tools → Options → Email** and switch on E-mail in the inputs.
- Alerts fire once per event on closed bars only.

8

Practise on a demo account first

Run it on a demo account for a few weeks. Note which signal types and scores suit your markets and timeframes before you risk real money.

- Most traders risk 0.5–2% of their account per trade.
- If it is not for you, request your refund within 60 days.

OPTIONAL

Other platforms: TradingView, NinjaTrader 8 and cTrader

The same idea on every platform — only the installation differs. Each version comes with its own PDF guide.

TradingView

1. Open the downloaded `Kumo_Forge_Pro_TradingView_Code.txt` and copy all of it.
2. In TradingView open the **Pine Editor**, paste the code and click **Save**.
3. Click **Add to chart** — it appears as "Kumo Forge Pro [AlgoFXStore]".

You get the full Pine Script source code and a 5-page PDF guide.

NinjaTrader 8

1. In the Control Center open **Tools → Import → NinjaScript Add-On**.
2. Select `KumoForgeProAlgoFX.zip` and confirm the import.
3. Open a chart, go to **Indicators** and add "Kumo Forge Pro AlgoFX".

Built for 5–15 minute futures charts such as MNQ, MES, MGC and MCL. 15-page manual.

cTrader

1. Unzip the download and double-click `Kumo Forge Pro AlgoFX.algo` — cTrader Desktop opens and installs it.
2. Or import the file in **cTrader Automate**.
3. Open a chart, open **Indicators → Custom** and add "Kumo Forge Pro AlgoFX".

One .algo file and an 11-page manual with 75 settings.

Six settings worth knowing

Min Confluence Score
Default 40 shows every setup worth a look; 80 shows Strong setups only.

Calculation Mode
Adaptive follows volatility; Classic keeps 9, 26 and 52.

SL Mode
Kumo Edge, Kijun or ATR — choose where your stop goes.

TP1 / TP2 / TP3 R:R
Targets at 1.5, 2.5 and 4 times the risk by default.

Kumo Thickness Filter
Skips TK crosses and Kijun bounces while the cloud is thin.

Show MTF Panel
Trend rows for M15, H1 and H4, plus an alignment alert.

PRINT & TICK

Your Kumo Forge Pro setup checklist

Tick each step as you go. Installation takes about five minutes.

- [ ] Pick your platform and check out
- [ ] Download and unzip
- [ ] Copy the file into MetaTrader
- [ ] Attach it to a chart
- [ ] Choose how selective it is
- [ ] Read the dashboard and the plan
- [ ] Set up alerts
- [ ] Practise on a demo account first

Good to know: menu and input names above come from the seller's product pages (November 2026). The seller answers questions before you buy at the support address on the product page — and our assistant can walk you through the setup.

YOUR 60-DAY TEST PLAN

Make the most of the money-back window

Days 1–3	Install it, read the manual and attach it to the markets and timeframes you trade, on a demo account.
Days 4–30	Watch every signal type. Note the score, where the stop and targets sit and how price reacts.
Days 31–50	Try a higher Min Confluence Score and different SL modes. Keep sizing trades at 0.5–2% risk on demo.
Before day 60	Decide: keep it, or request your refund through the Digistore24 order e-mail.

FAQ

Quick answers

What is Kumo Forge Pro?

Kumo Forge Pro is an Ichimoku indicator by Kestutis Balciunas (AlgoFXStore). It adapts the Ichimoku periods to volatility, scores every setup out of 100 and draws an entry, a stop and three targets for each signal.

Does Kumo Forge Pro repaint?

No. Signals are decided on closed bars; once a plate or marker prints, it stays where it is, according to the seller.

How much does it cost?

MetaTrader 4 + 5, TradingView and cTrader versions cost €47 each, the NinjaTrader 8 version €77 — all one-time payments with a 60-day money-back guarantee.

What does “Long 74%” mean?

It is the confluence score: 74 points of agreement out of 100. It is not a probability that the trade will win.

Will it trade for me?

No. It is an indicator: it scores setups, draws the plan and sends alerts. You choose the position size and place the orders.

Which markets and timeframes does it suit?

The seller shows it on forex, gold, stock indices and crypto, mainly from M15 to H4 on MetaTrader and 5–15 minute charts for futures on NinjaTrader 8.
